

# Incubation Management to Transform Research & Innovation in Academia

In our journey to becoming ‘Atmanirbhar Bharat’, it is critical that we transform the young innovators and researchers into the next generation of technology entrepreneurs of the country.

**And where better to implement this than the premier institutes with young ambitious talent of outstanding calibre?**

**23<sup>RD</sup>  
JULY 2020  
4 PM - 5 PM**

Vish Sahasranamam, Co-founder & CEO, Forge to deliver a talk on ‘Incubation Management to Transform Research & Innovation in Academia’ to the faculty of Atal Bihari Vajpayee School of Management and Entrepreneurship, **Jawaharlal Nehru University** as part of the two-week FDP on COVID-19 New Age Teaching Pedagogy.

**potential** for high-growth!

## Problem Statement

There is currently no means to remotely monitor high-risk/vulnerable persons, medical practitioners & patients, especially when there is a huge demand-supply gap in the capacity for delivering healthcare services.

**Wearable** device that collects data about the patient's **body temperature, heart & lungs** paired with a companion mobile application enabling **remote monitoring & diagnostics** of COVID-19

## Value Proposition

- Seamless tracking of a large number of individual persons/patients
- Demographic analysis of disease progression
- Data driven decisions for planning Surge Capacity
- 15-20% Quicker diagnostics
- Reduction in the total number of tests conducted

**Smart glass** using **Mixed Reality & AI-enabled facial recognition** that instantly measure **temperature, mask** status and detect **violations** of social distancing

## Problem

In the post-lockdown era, Malls, Airports, Railway & Bus stations carrying out manual screening to isolate people with symptoms is going to become a huge operational burden.

## Value Proposition

- Large Scale rapid thermal scanning (100/minute)
- 1-3 meters scan distance at an accuracy of 0.5C
- Identify people without masks
- Custom analytics & alerts

A **portable assistive breathing device** that automates in pumping air/oxygen into a patient's lungs ensuring **effortless respiration**, thus averting terminal illness.

## Problem

Breathing assistance at initial stages of COVID-19 diagnosis leads to lesser number of escalations to terminal illness in patients.

1 out of every 6 positive cases become terminally ill and require ventilator support.

## Value Proposition

- Non-invasive & light-weight breathing aid
- Requires minimum expertise
- Provides adjustable pressure & breathing levels

An ultra lower power **mesh communication** system using a combination of hardware and software modules creates a **local positioning system** capable of tracing, tracking and monitoring movements of individuals.

## Problem

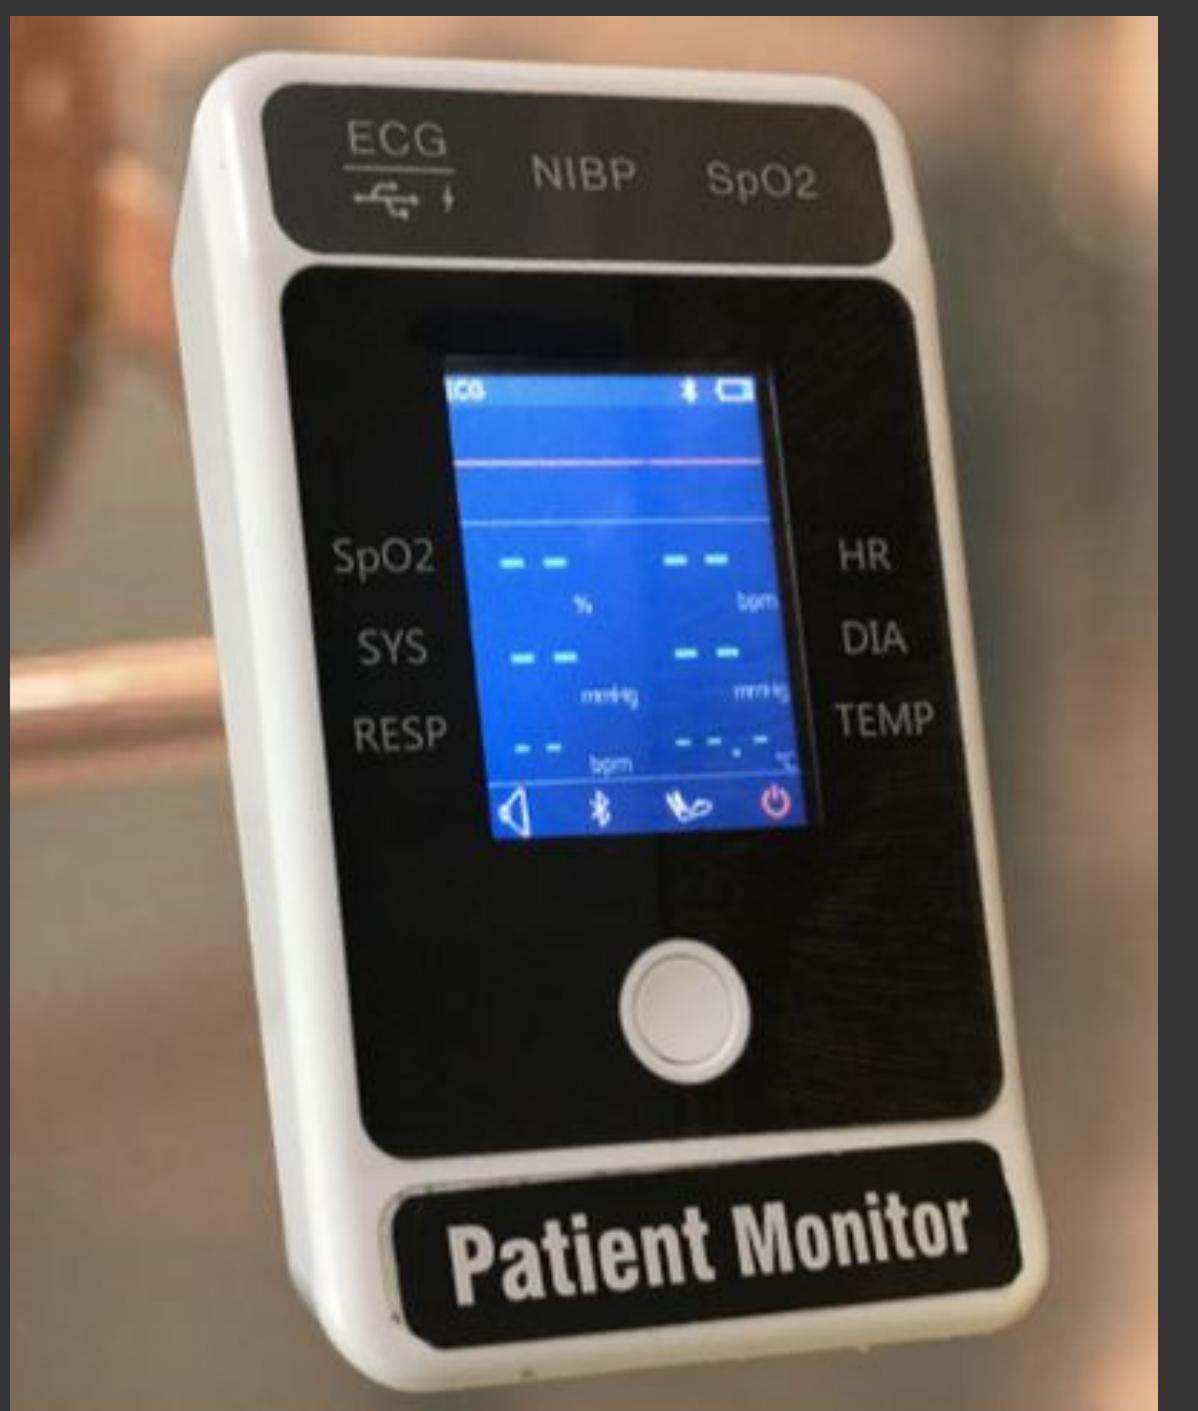

Tracking movement of individuals within a restricted space, especially in hotspots with higher risk of community transmission, is a major challenge to effectively contain spread of infections.

## Value Proposition

- Reduced manpower for surveillance of movement
- Quick historic contact tracing with least amount of time and human intervention
- Monitoring of all individuals in a large population

Which INNOVATION  
will you invest Rs.50L?

**What I CAN USE!**  
**What I WILL PAY FOR!**

INNOVATION RISK FACTORS						
	IS THE PROBLEM STATEMENT DEFINED CLEARLY?	» Vague definition of the problem but unable to understand a real-world use-case/scenario and end-users that face the problem;	» Only a generalized problem statement is indicated but without any indication of real-world use-case/scenario and end-users;	» A novel idea but purely technical in nature without a strong case for it being applied in a real-world problem/use-case scenario;	» Clearly defined problem statement as it is experienced by the beneficiary (beneficiaries) in the real-world but without a description or indication of significance/ magnitude;	» Clearly defined and validated problem statement with description of the significance and magnitude of the problem along with profile of different types of beneficiaries impacted by the problem;
	IS THIS PROBLEM WORTH SOLVING?	» Idea is about offering a very conventional product done several times before;	» A technical challenge in the form of a gap in existing systems/ solutions/processes is described but without any specific description of a real-world use-case/scenario and end-users that face the problem;	» Conventionally solved problem but idea is about solving some minor gaps in the existing solutions;	» Unsolved problem but with limited problem significance/magnitude;	» Higher degree of problem significance/magnitude but relates to gaps/issues in the existing solutions in the market today;
	IS THE CHOSEN TARGET CUSTOMER (TYPE/PROFILE) STRONGLY MOTIVATED TO SOLVE THE PROBLEM?	» A generalised description of the beneficiary without any indication of a specific target-customer;	» A weak profile of the target customer (end-user) chosen is indicated along with a generalized description of use-case (problem scenario);	» The target customer (profile) selected for validation is not aware or convinced that the problem is critical to solve;	» The selected target customer has tried solving the problem and is actively looking for more effective/ complete solutions;	» The selected target customer has expressed interest to actively co-create an innovative solution;
	IS THE CORE VALUE PROPOSITION DEFINED, QUANTIFIED AND VALIDATED?	» Vague description of the target customer (end-user) but unable to understand how solving this problem offers any benefits;	» A generalised description of the beneficiary without indication of specific target customer but the benefits offered are too minimal or insignificant;	» A generalised description of the beneficiary without indication of specific target customer with reasonable benefits offered but not quantified;	» A compelling value proposition targeting a specific target customer but lacks any validation in the form of user/customer feedback;	» A strong value proposition with quantified gains backed by strong validation from a reasonable number of target users/customers;
	IS THE MUP CONCEPT EFFECTIVE IN TESTING THE TARGET VALUE PROPOSITION?	» Vague definition of the solution without a specific set of outcomes that prove that the problem has been solved;	» Solution is presented purely from a technical point of view and will work in the lab but looks impractical for end-user adoption;	» Solution defined fits the tag of MUP in terms of offering only the core feature/functionality to test/prove the value proposition, but has not been designed to overcome adoption barriers;	» A very cost effective MUP that can be prototyped rapidly to test the value proposition and shall overcome the adoption barriers;
